

HARVESTING IMPLEMENT FOR HARVESTING STALK-LIKE PLANTS

Abstract of the Disclosure

A harvesting implement for the harvesting of stalk-like plants comprising an intake arrangement for taking up plants located on a field and a stalk divider arranged ahead of the intake arrangement in the forward direction. The crop divider is supported in bearings so that it is free to move relative to the intake arrangement when it is in its harvesting position. The stalk divider is free to move in the sideways direction, that extends transverse to the forward direction.
